Prayas:

Pursuing Excellence in Governance

Throughout the world, no country is as vast and diverse as India. India harbours the populace with a spectrum of aspirations on its widespread geography. Acknowledging and fulfilling these aspirations is the main obligation of any Government. Various ministries of the Government have been running different schemes to touch upon every aspect of the aspirations of their people, and this requires a huge amount of capital investment and other resources. So, it also becomes the duty of the Government to monitor the efficiency of their schemes, measure the impact on the citizens, and analyze the outcomes of their efforts and investment. To achieve this, every scheme collects the data points on different touchpoints in their defined geographic unit which may lead to inconsistency of Data. Due to this inconsistency Government data remains in siloes, and this poses a challenge for decision-makers in unifying data from various ministries and get required data across ministries and schemes at the granularity they need.

This generates the need for a system which can unify the data from different schemes and ministries at different geographic units. A system that empowers the decision-makers to have a real-time unified view of the various schemes across India, compare performances of geographical units and helps in taking data-driven informed decisions. After being entrusted with the responsibility by the Government of India to develop this requisite system, NIC/NICSI envisaged the concept of "Prayas", a unified dashboard with the objective of "pursuing excellence in Governance".

A comprehensive study has been done to identify 39 schemes of 16 ministries with 157 KPIs and further these KPIs have been grouped in 4 sectors which directly impact the aspirations of the citizens.

Dashboard for

Good Governance

In this fast-paced ever-changing world meaning of 'Good Governance' has also changed. Today's Governments need instant sight of their multi-dimensional key performance metrics and drivers, to make better and quicker decisions. For this purpose, plethora of data is being generated every minute from various government operations. This data when consolidated on the dashboard, in an easy to understand visual display, enables the decision-makers and administrators to form their objectives measurable, ask rights questions, and initiate actions. This leads to better decision-making, planning, and effective policies for citizens.

Views

117

Three consistent views for all Schemes:

1. Overview:

This screen exhibits the progress of the major key performance indicators for the respective schemes. Which can be drilled down based on available geographic granularity and time period. In many cases same screen shows the metrics comparison between geographical units i.e. top and bottom performing regions.

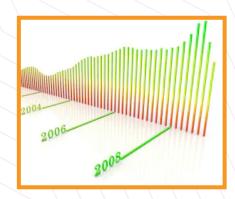

2. Map View:

Map view adds value to dashboard by representing the color-coded, region-wise progress of defined metrics on the Map. This helps the decision-maker to easily compare the performance of various geographical units in a single glance.

3. Time Series:

In this view, performance metrics are plotted against the time variable. It helps in studying the past behaviour, the impact of any particular event on the scheme, and catch any unusual variation.

Guiding **Principle**

Collecting data electronically from the source:

To maintain the data sanctity and timeliness, data is collected from all the sources through electronic means, for eg. APIs.

Role-based access to the dashboard:

To avoid confusion and enhance the usefulness of the dashboard, all stakeholders are given access to the information relevant to them.

02

Consistent views across all

stakeholders:
For the sake of better communication and understanding between the stakeholders, views are kept consistent.

Components of the Dashboard:

List of participating Ministries and their schemes

Finance

Sukanya Samrudhhi Yojana

PM Suraksha Bima Yojana
